EDUCATION

California State Polytechnic University, Pomona , B.S. Computer Information Systems	08/2017 – 08/2021
Boston University , M.S. Data Science	08/2025 – Present

WORK EXPERIENCE

Senior Technology Consultant Ernst & Young LLP, Los Angeles, California	09/2022 - Present
---	-------------------

- Contributed to a high-stakes data reconciliation initiative (200+ financial applications) by designing complex reconciliation models in Power Query. Achieved 95% matching accuracy, reducing data errors by 30%, and supporting critical compliance readiness via 15+ stakeholder reports.
- Managed and upheld data integrity standards within the Data Governance workstream by conducting rigorous Exploratory Data Analysis (EDA) and advanced preprocessing on high-volume datasets.
- Executed the design and implementation of robust ETL/ELT data pipelines using Python and advanced SQL scripting to centralize fraud data, improving detection efficiency and reducing investigation turnaround time.
- Developed and automated end-to-end defect validation testing using specialized tools (e.g., Pytest, SQL) to prevent defect recurrence, significantly strengthening Quality Assurance (QA) maturity across multiple project workstreams.

Associate Business Analyst Intern Health Care Service Corporation, Chicago, IL	06/2022 – 08/2022
--	-------------------

- Documented and refined 50+ Jira stories and 10 epics, aligning requirements with business priorities and reducing rework 20%, enabling on-time sprint completion.
- Facilitated grooming and sprint planning with 3 product owners and 2 engineering squads, accelerating delivery of high-priority features by 15%.
- Built Excel KPI trackers (pivot tables, VLOOKUP, conditional formatting) to monitor budget adherence and sprint velocity, enabling proactive risk mitigation and 95% on-time delivery.
- Produced 8+ executive-ready decks and milestone dashboards, improving cross-functional communication and saving ~10 hrs/month in status meetings.
- Standardized reporting templates across departments, reducing duplicative reporting by 25% and streamlining leadership communication.

Associate Analyst Infosys Limited, Chicago, IL	09/2021 – 06/2022
--	-------------------

- Managed 40+ Jira stories for finance reporting initiatives, improving sprint acceptance 18% and reducing misinterpretations during development handoffs.
- Partnered with finance and engineering teams to deliver high-impact reporting features, aligning deliverables with stakeholder requirements and project timelines.
- Automated Excel/Jira dashboards to surface interdependencies and shorten blocked-task resolution times 22%, improving on-time completion rates across 6 workstreams.
- Standardized project reporting across two business units, boosting communication efficiency 20% and improving leadership visibility.
- Created executive-ready performance decks summarizing progress and risks, cutting project review cycle times 15%.

SELECTED PROJECTS

Data Governance & Data Profiling for Financial Reporting

Personal Case Study

- Profiled 50+ financial datasets to assess null rates, duplicates, schema drift, and completeness issues impacting downstream financial reporting.
- Designed standardized data quality metrics and documentation templates to align finance, analytics, and engineering stakeholders on shared definitions.
- Produced executive-ready data quality summaries translating technical findings into business risk and remediation priorities.
- Established repeatable profiling workflows using Python and SQL to support ongoing governance and audit readiness.

Large-Scale Financial Data Reconciliation

Personal Case Study

- Built reconciliation logic to match multi-million-row financial datasets across disparate source systems using standardized identifiers and business rules.
- Analyzed unmatched and exception records to surface root causes including timing differences, data latency, and upstream data quality gaps.
- Reduced unexplained discrepancies by systematically categorizing breaks and defining ownership for remediation.
- Documented reconciliation assumptions and controls to support audit transparency without exposing sensitive client data.

TECHNICAL SKILLS

Programming: Python, SQL	BI Tools: Tableau, Power BI, Alteryx, Excel PowerQuery
Cloud: AWS, Azure, Terraform	Databases: Redshift, Neo4j, SQL

CERTIFICATIONS

Alteryx Designer Core | Amazon Certified Cloud Practitioner | Neo4j Certified Professional
